The in-service subcommittee was called to order at 1:00 PM. A total of 44 participants attended the meeting. The participants all introduced themselves and their affiliation.

There was one interpretation that was discussed with the subcommittee pertaining to Section B.2.3.1.1 which was approved by the ITG.

There was a discussion about Annex B being an informative annex or a normative annex.

The meeting started with a review of the previous meeting minutes and previous action items. There were a total of four proposed changes discussed during the meeting.

- Proposed changes to B.1 pertaining to providing qualification options for pipeline systems which operate under low thermal severity levels were discussed.
- Proposed changes to B.3 pertaining to in-service welder qualification were discussed.
- Proposed changes to B.3.3 pertaining to destructive test requirements for longitudinal seam welders were discussed.
- Proposed changes to a replacement to Section B.7 were discussed. These proposed changes included changes to how the essential variables would be presented in Annex B as well as repair qualification requirements. The repair qualification requirements included repair of a new in-service weld and the repair of an existing girth weld in an operating pipeline.

After the four proposals were discussed the results of an Annex B survey were presented. The survey was requested from the Repair NDT Task group about different defect types and defect locations. The results of the survey were provided to the Task Group for consideration.

Co-chairs thanked everyone for their participation and the meeting was adjourned at 5:00 PM.
