Revision

16RCD revision 2 released 09/2015
Further Task Group Work

Last meeting held 12/2017, Houston

Enhanced design validation testing procedure (Annex G) finished
  ◦ Plan to introduce Service Application Levels for RCDs
    ◦ SAL 1 – Water based mud testing at elevated temperature
    ◦ SAL 2 – Oil based mud testing at elevated temperature
    ◦ SAL C – Test variables to be set by test designer

A decision was made to remove the mandrel misalignment angle as a test variable as it would be too difficult to measure and attain in practice

Draft Annex distributed to Task Group for comment. Expect responses by mid-February.

Upon internal comment resolution, proposed changes will be submitted for vote.
