

## Technical Inquiries for API Standard 625, *Tank Systems for Refrigerated Liquefied Gas Storage*

Last updated April 2019. New additions since the last posting are highlighted yellow.

**Important Note:** The API inquiry process is intended to help users understand the technical requirements in the standard without providing the intent, background, and technical basis. The posted interpretations (responses) to inquiries are based on the standard's edition/addendum in effect when the interpretation was prepared. Before applying any interpretation, always look for a later interpretation (if one exists). If there is a conflict between interpretations, use the latest interpretation. If there is a conflict between an interpretation and the current issue of the standard, use the current standard.

Section	Edition	Inquiry No.	Submitted Inquiry	SCAST Reponse
5.5	Ed 1, Ad 2	625-2017-F1	As an alternative to in-tank valves, in a "Double or Full Containment Tank System with Penetrations", is it acceptable to provide forged shell nozzles with isolation valves?	No. Section 5.5 only refers to In-Tank Valves.
